# Realizing Africa's AI Opportunity: Addressing systemic challenges

Presentation by:

**Philip Nelson**

Director, Software Engineering,  
Google Research

**Aisha Walcott-Bryant**

Lead, Google Research Africa &  
Senior Staff Research Scientist

## Google Research

We harness the power of AI to advance Google products and address societal challenges, working closely with global users, communities and partners to impact the lives of billions.

**2K**

Languages

**3K**

Ethnic Groups

**>40%**

of youth on the planet by 2030

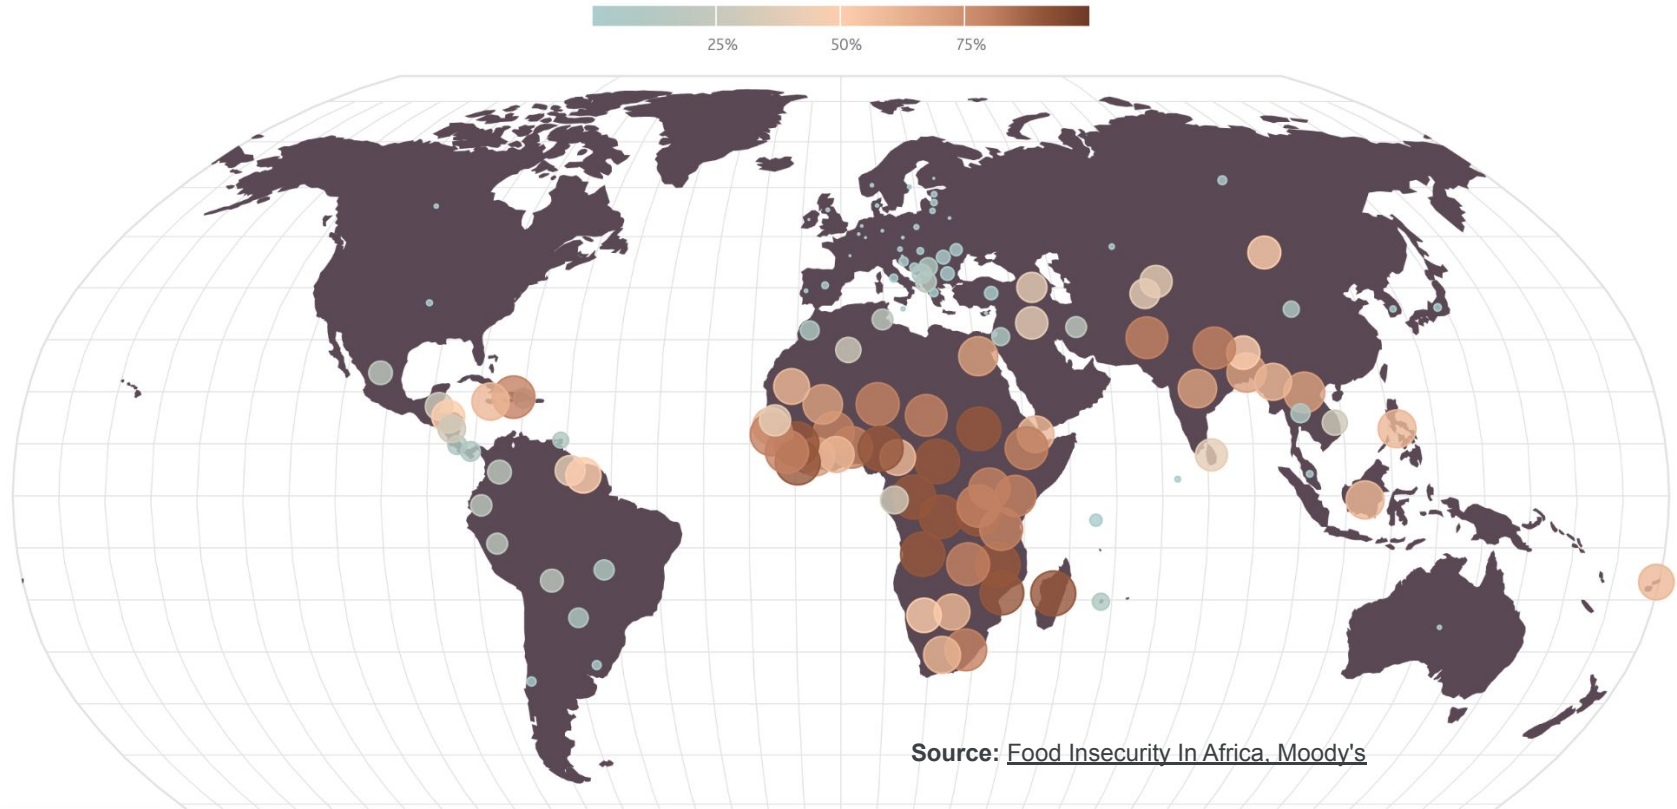

**3B+**

Population Growth by 2050

## Three billion people worldwide couldn't afford healthy food in 2020. One-third were Africans.

Share of population who couldn't afford a nutritious diet in 2020, according to The World Bank:

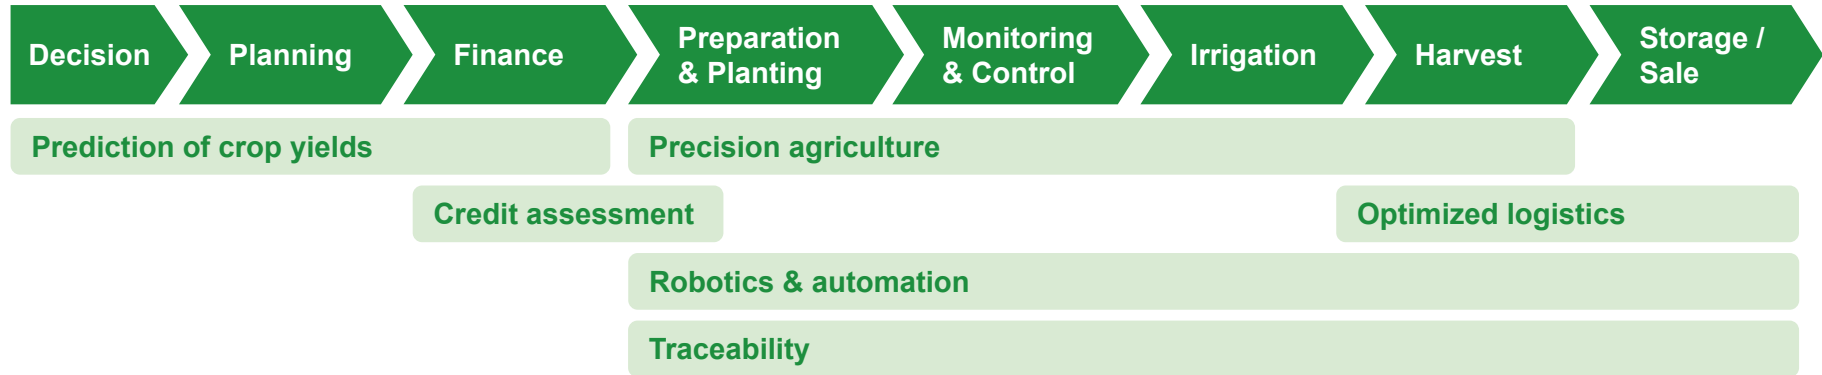

Source: [Food Insecurity In Africa, Moody's](#)

Every **\$1 invested** in digital technology in sub-Saharan Africa will create over **\$2 in wider economic value** for the region by 2030.

# AI will transform agri-food systems along the agriculture value chain in LMICs

## Case study: Hello Tractor

Hello Tractor launched an innovative platform that connects tractor owners with farmers. Tractors are fitted with low-cost IOT devices which collect data about the farm and the tractor to provide predictions on, for example, tractor maintenance or likely crop yields.

# Google's Digital Sprinters Framework: To realize the AI opportunity, public and private sector need to collaborate across four pillars.

## Physical capital

Enable access to the internet through affordable data, devices and compute.

## Human capital

Foster digital skills development to enable AI usage and tool development.

## Technology

Promote the adoption of innovative technologies. Enable responsible and localized innovation.

## Competitiveness

Advance the digital economy through suitable policies and regulation.

# Physical capital: closing the digital divide

**58%** of adults in SSA are **not connected** to the internet.

## Investments needed for:

### → Data

Infrastructure expansion and innovative solutions for last-mile.

### → Devices

Ultra affordable smartphones and financing schemes.

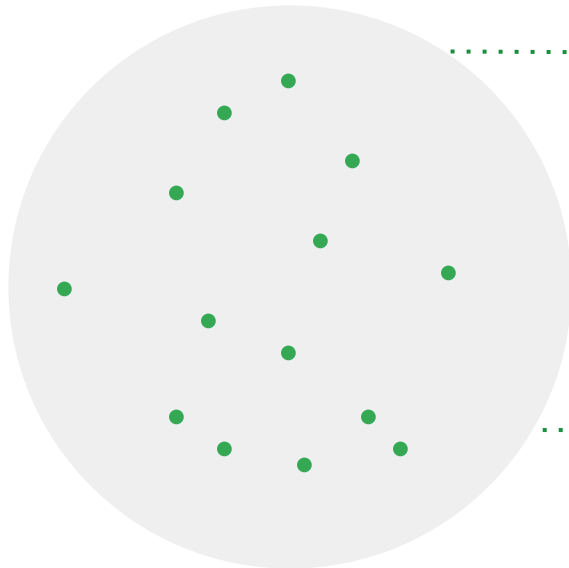

### → Compute

Centralized data centers and local compute power on mobile devices

# Human capital: AI-ready workforce

## Governments must invest in AI education and training.

Building an AI-ready workforce calls for a collaborative, society-wide effort involving government, the private sector, and educational institutions.

## AI Learners

with basic AI literacy

## AI Implementers

who use and adapt AI tools at work

## AI Innovators

who can help to shape how the technology evolves

# Technology: Bold & Responsible, together

## Data

High-quality datasets are essential for training effective AI models that minimize bias and can be tailored to meet specific needs.

- 
- Open data standards
  - Secure data sharing infrastructure
  - Copyright and privacy protection

## Localization

For AI to have a broad impact, solutions must be rooted in local contexts.

- 
- Local languages
  - Local tool optimizations
  - Local user needs

## Responsible AI

As with any nascent technology, AI also holds some risks. A bold, responsible and collaborative approach is needed to enable responsible innovation.

- 
- National AI strategies & regulations
  - Robust AI governance
  - Bold & responsible AI

## **Google Research Africa:**

**To build a world-class African research organization that is delivering sustainable societal and business impact for Africa and the world.**

# Google Research Africa: Overview

## Focus

Open Buildings

Food Security

Weather

African Languages

## Collaboration

Ai For Maternal Ultrasound

Access To Maternal Care

Tuberculosis Screening With Ai

# Food Security - Early Work

## Food Insecurity Forecasting

Early warning systems for vulnerable populations at risk of food insecurity

UNICEF/Omid Fazel

## Plant Phenotyping

Transforming climate resistant seed breeding at scale with AI

GIAT

## AI Assisted Actionable Ag Advice

Providing locally relevant advice to increase smallholder productivity

**Mission: To build AI-driven tools that empower communities to achieve global food security.**
